What can one fold change

How can I compare two paper shapes without claiming more than I tested?

The two versions

Sketch A flat and B with a shallow lengthways V. Label the supports and gap.

What stays the same

List the paper, gap, pads and observation you will keep consistent.

My observations or open questions

Record A and B separately. Mark a prediction, fictional entry or unknown clearly.

My careful conclusion

What does this comparison show? What does it leave untested?

Keep it, change it or leave it here. Sharing is optional.
