A food web with labelled assumptions

How do arrows and evidence change the meaning of a simple food web?

My key

State exactly what an arrow means.

The supplied web

Draw or list the five solid links.

A proposed link

Keep a hypothesis visually distinct and labelled.

What remains open

Name information needed before making a stronger claim.

Keep it, change it or leave it here. Sharing is optional.

Map a fictional microhabitat

Which small differences would be useful to record before making an explanation?

My map key

Keep square area, row order and P meaning explicit.

The four records

Attach light, moisture and count to each square.

One pattern

Describe a supported difference without naming its cause.

A next question

What extra repeated information would make comparison more useful?

Keep it, change it or leave it here. Sharing is optional.

What makes a useful species record

Which details turn an invented sighting note into a clearer record without guessing an identity?

What the source supplies

Copy the slip's time, place, count and described features.

What the draft added

Identify the unsupported species claim.

My corrected record

Use the source details and an honest identity label.

A next check

Name a source check without inventing or submitting a record.

Keep it, change it or leave it here. Sharing is optional.
